

ImagePerfect™

Analysis of the carbon footprint of ImagePerfect's products

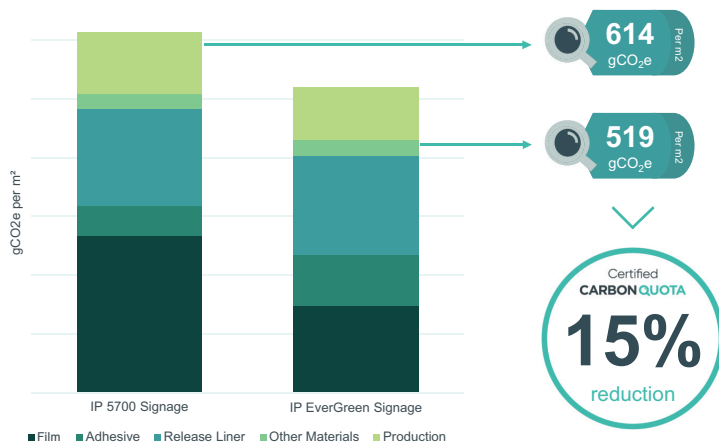

Understanding the carbon footprint of ImagePerfect's products is the cornerstone of our sustainability journey. Below we share the results of a cradle-to-gate* analysis conducted and certified by CarbonQuota in 2023 of 4 key product ranges.

1. IP 5700 Signage Films 614g CO₂e / m²
2. IP 2503 594g CO₂e / m²
3. IP EverGreen Signage Films 519g CO₂e / m²
4. IP EverGreen Digital Films 461g CO₂e / m²

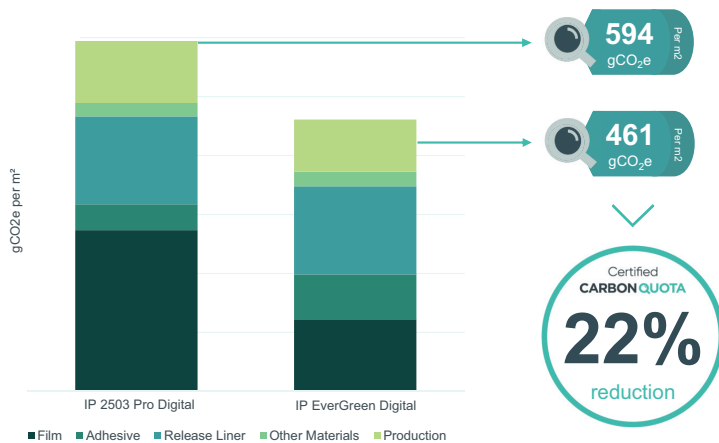

Our ImagePerfect EverGreen Signage and Digital products show a significant reduction in their environmental impact compared to the equivalent standard choices, evidenced by a 15% and 22% reduction in their carbon footprint respectively.

*The CarbonQuota assessment on these ImagePerfect materials was conducted 'cradle-to-gate', which means all emissions from the product up to leaving the gate of the Eikon manufacturing facility, including transportation of raw materials to Eikon.
